

yamada

High Performance Air Operated Diaphragm Pumps

Engineered to Perform. Designed for Long Life.

Rugged, Bolted Construction

All Yamada pumps feature bolted construction, which eliminates leaks and simplifies post-maintenance reassembly. Bolted construction is superior to clamp band retainers, which frequently require frustrating, unnecessary leakage rebuilds from misalignment during reassembly.

Outside-Accessible Air Valve

Inspection or maintenance of every Yamada air valve may be performed without removing the pump from service.

Unified Air Valve Concept

Common-size air valve assemblies reduce parts confusion.

Pilot Valve

Unique to the Yamada design is an individual modular pilot valve that actuates the air valve. It is depressed slightly by the inner center disk creating a pressure drop at one end of the air valve, allowing shifting to occur. It is maintenance free with no cumbersome snap rings or lubricated dynamic o-rings to replace or repair.

Optimal Stroke Length

Extensive research has led to the development of an optimal stroke length that maximizes diaphragm life and performance while minimizing downtime and maintenance costs.

Yamada® Patented Air Valve Technology

Yamada air valve technology is the heart of the air-powered double diaphragm pump and determines reliability. Yamada holds three patents on its field proven valve and enjoys a superior reputation throughout the industry.

Unified Air Valve Concept

To simplify, Yamada offers two common size air valve assemblies within five sizes of pumps (3/4" & 1" pumps and 1-1/2", 2" & 3" pumps) further reducing reassembly confusion and parts inventory. Other air-powered double diaphragm pump manufacturers offer multiple air valve designs and revisions in an effort to address pump reliability problems. Multiple designs and revisions typically create maintenance rebuild issues, parts confusion, and obsolete inventory. *Whether your pumps are functioning continuously or intermittently—at high or low pressure—using dirty or clean air—Yamada offers one field proven design.*

Truly Non-Lubricated Air Valve

The patented Yamada air valve on all NDP series pumps never requires lubrication or pre-packing. The advanced design eliminates the need for external lubrication, which can lead to pumpage contamination and maintenance headaches. **Yamada is proud to be the originator of non-lubricated air valve technology for air-powered double diaphragm pumps.**

Some air-powered double diaphragm pump manufacturers claim to offer a non-lubricated air valve. Dependent upon the competitor's design, the air valve will probably require lubrication for continuous operation, or lubricator installation if moisture is present within the air system. These valves are pre-packed with grease and are not truly non-lubricated.

Component Replaceable

All Yamada air valves can be restored with individual components, without requiring complete valve and housing replacement.

Many competitor air valves incorporate a complicated design which requires complete replacement of the valve assembly and housing, further increasing the cost of ownership.

Common-size air valve assemblies reduce parts confusion.

↑ Air Valve fits NDP-20 (3/4") & NDP-25 Series (1")

← Air Valve fits NDP-40 (1-1/2"), NDP-50 (2"), & NDP-80 (3") Series Pumps

Non-Stalling

A patented non-centering, spring-assisted shifter is incorporated into every NDP Series pump, ensuring a positive shift every time.

The 304 stainless steel C-springs provide exceptional durability and longevity and are tested to last over **300 million cycles!**

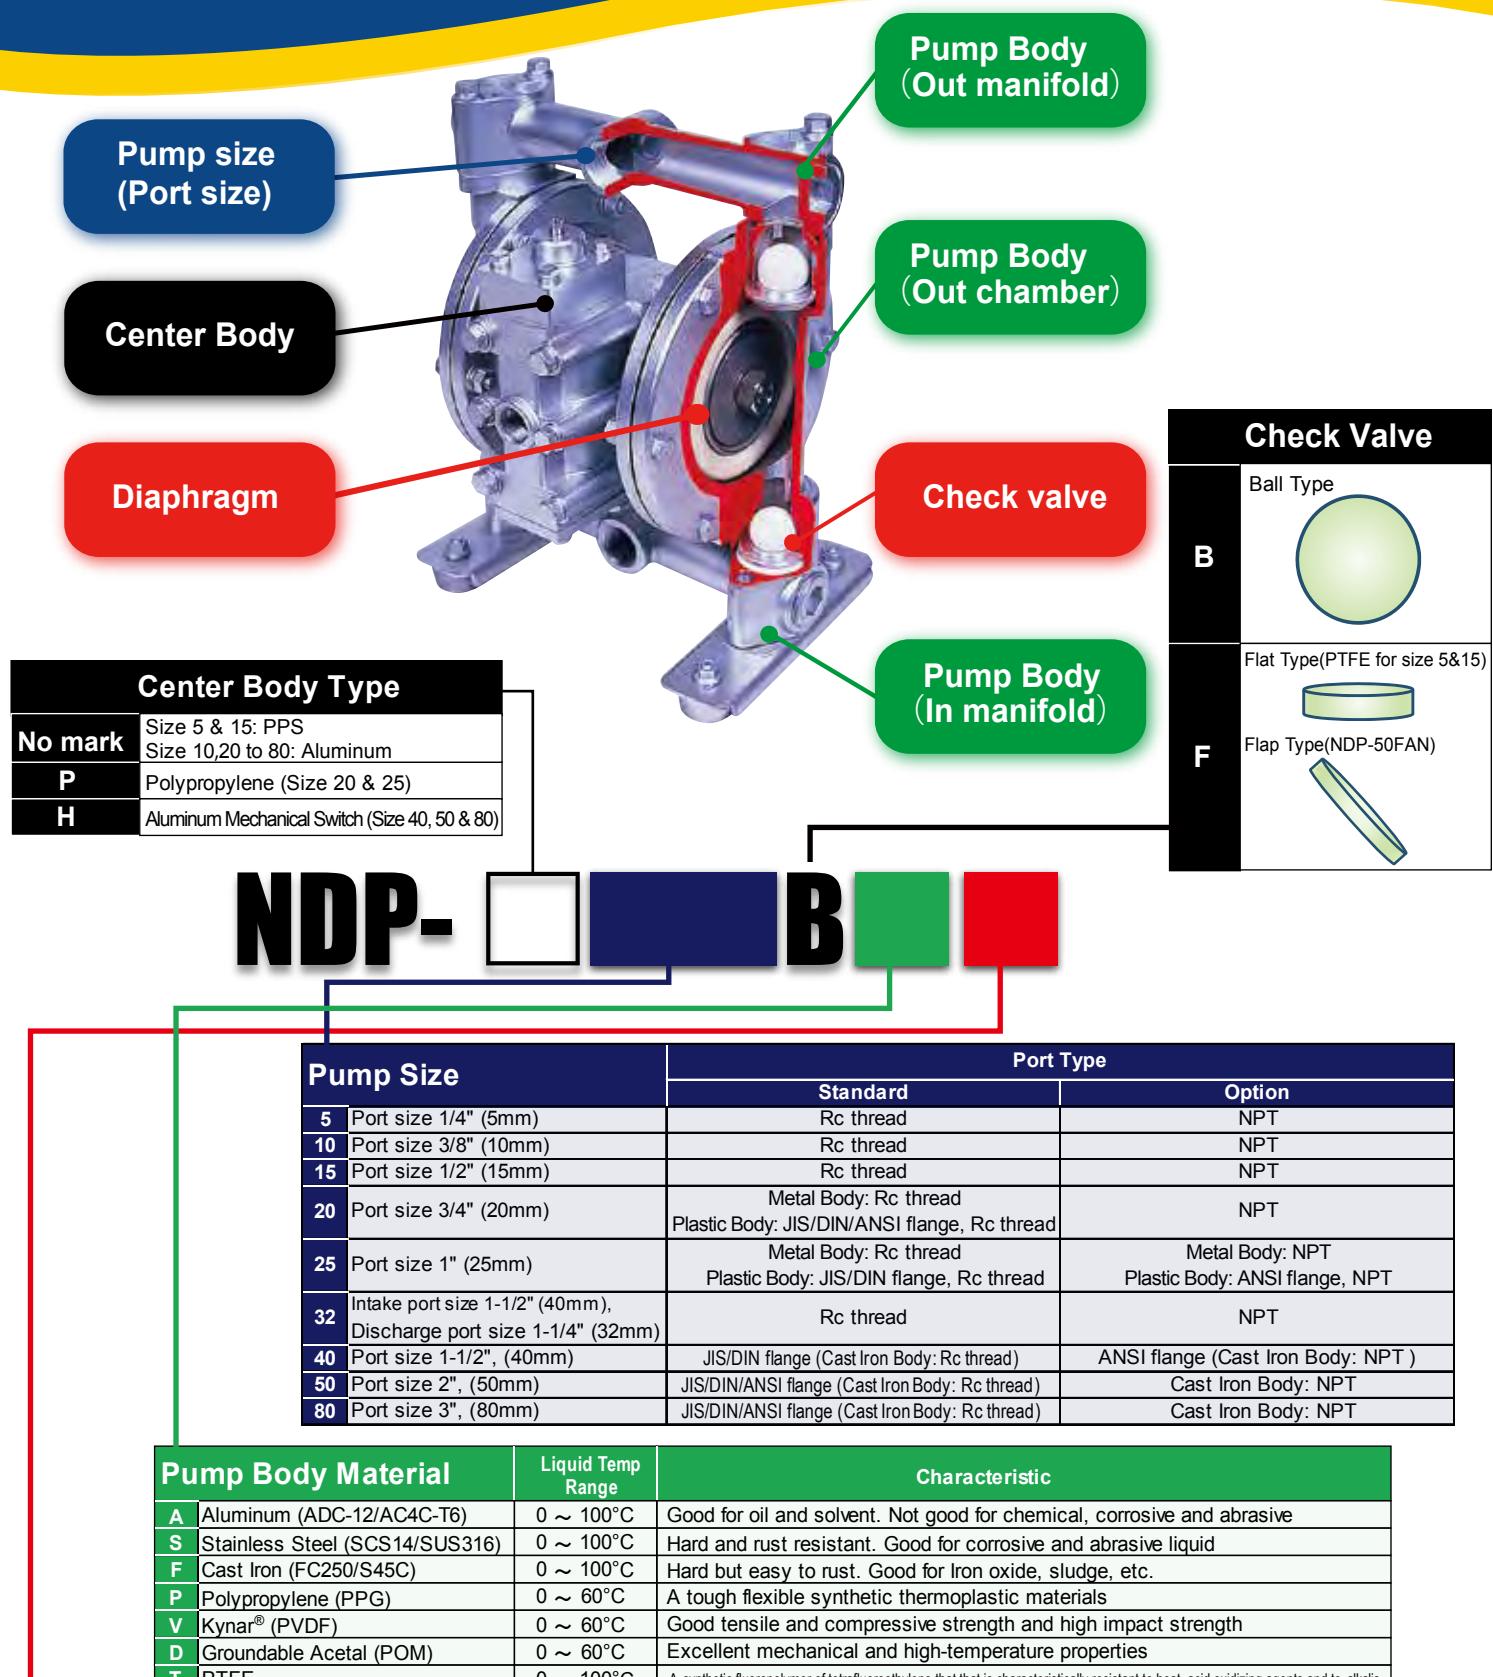

The spring assist also aides in long dead head applications for reliable startup.

Advantages and Characteristics

1. **Handles a wide variety of fluids with high solids content:** No close fitting or rotating parts so liquid with high solids content and/or size can be easily pumped.
2. **Self Priming:** The Yamada pump design (incorporating internal check valves) allows for high suction lift even at dry start-up and with heavier fluids.
3. **Ability to run dry:** No close fittings or sliding parts are at risk—the pump can run dry without damage.
4. **Variable flow rate and discharge pressure:** Yamada pumps will run at any setting within their operating range simply by adjusting the air inlet pressure and system conditions. One pump can fit a broad spectrum of applications.
5. **Portable/Simple Installation:** Yamada pumps transport easily to the application site. Simply connect your air supply line and liquid lines; the pump is ready to perform. There are no complex controls to install and operate.
6. **Dead Head:** Because the discharge pressure can never exceed air inlet pressure, the discharge line can be closed with no damage or wear. The pump will simply slow down and stop.
7. **Shear sensitive:** The gentle nature and minimal parts contact with the liquid makes Yamada pumps an excellent choice for shear sensitive fluids.
8. **Explosion Proof:** Yamada pumps are operated by compressed air, therefore, they are intrinsically safe.
9. **Submersible:** If external components are compatible—Yamada pumps can be submerged in the liquid by simply running the exhaust line above the liquid level.
10. **Pumping efficiency remains constant:** There are no rotors, gears, or pistons, which wear over time and lead to the gradual decline in performance/flow rate.

For additional information on Yamada products and services, visit yamadacorp.co.jp/global

Model Indicator

Diaphragm/Check Valve Material	Liquid Temp Range	Characteristic
C Neoprene (CR)	0 ~ 70°C	A tough, synthetic rubber that is resistant to the effects of oils, solvents, heat, and weather
N Buna N (NBR)	0 ~ 70°C	An oil-resistant synthetic rubber that is resistant to oil, fuel, and other chemicals
E EPDM	0 ~ 80°C	A type of synthetic rubber that is resistant to heat, ozone and weather, polar substances and steam
H Viton® (FKM)	0 ~ 100°C	A thermoplastic polyester elastomer that gives the flexibility of rubbers, the strength of plastics, and the processibility of thermoplastics
S Santoprene® (TPO)	0 ~ 100°C	A flexible and durable elastomer that has environmental aging resistance, electrical properties
V Hytrel® (TPEE)	0 ~ 100°C	A fluoropolymer elastomer that has oil, heat and chemical resistance
T PTFE	0 ~ 100°C	A synthetic fluoropolymer of tetrafluoroethylene that is characteristically resistant to heat, acid oxidizing agents and to alkalis

Fair Guideline of Pump size and Flow rate

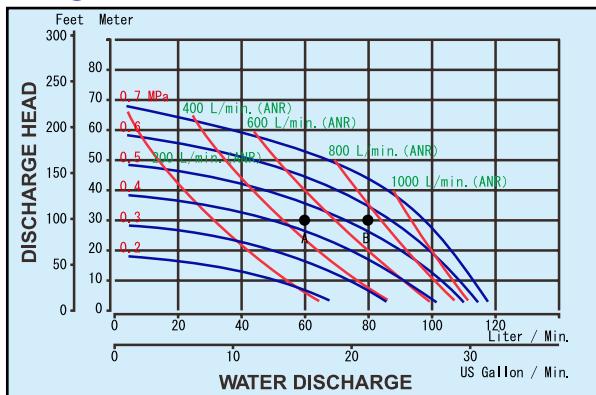

Operation with the maximum cycle shorten the pump lifetime.

To optimize pump performance and lifetime, please select pump in reference to this guideline.

L/min

NDP-5	5	50	100
DP-10	10		
NDP-15	20		
NDP-20	60		
NDP-25		90	
NDP-40	200	250	500
NDP-50		320	
NDP-80		450	

Using Performance Curves

Precautions for pump selection

* Select a pump with safety margin (1.5 times or higher) appropriate for the required conditions with taking effective use of a diaphragm and other expendables into consideration.

* The performance curve shown on the right indicates the data measured with fresh water (viscosity 1 mPa·s, specific gravity 1.0) by dip grazing with the shown devices. The amount of liquid discharged from the pump greatly varies depending on various factors such as the "viscosity, specific gravity and slurry concentration of liquid to be transferred," "suction lift," "discharge head" and "pneumatic transportation distance." If you are not sure which pump you should select, fill in the selection criterion of the "Inquiry Sheet" on the end of the document as much as possible, and contact us.

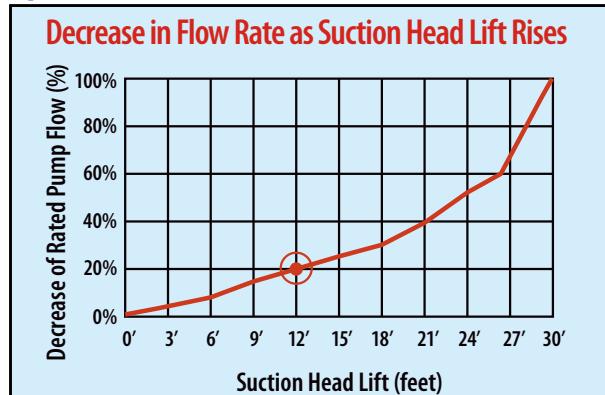

1. The solid lines plot the relation between the amount of the discharged liquid ("water discharge") and the discharge head when the corresponding pressure is given. First, decide which curve corresponds to the desired air pressure.

2. For example, when the supplied air pressure at your site is 0.5 MPa, check the curve marked "0.5 MPa."

3. When liquid to be transferred is fresh water (viscosity is 1 mPa · s and specific gravity is 1.0), the desired water discharge is 60 L/min, and the discharge head is 30 m, the corresponding axes intersect at Point A. This point is located below the 0.5-Mpa curve and satisfies the desired water discharge and discharge head with this pump (Example: NDP-20).

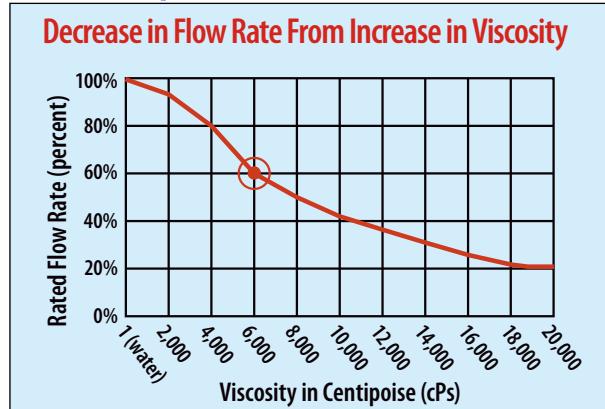

4. If it is required that "the water discharge is 80 L/min, and the discharge head is 30 m," the intersection point is "B" above the 0.5-Mpa curve and this indicates that this pump cannot satisfy your conditions. In such a case, we recommend that you select the larger one (NDP-25).

Specified Suction Lift

With a suction lift of 12-ft, pump rate decreases by approximately 20%. Valid for pumps 3/4" and larger; data varies with pump configuration.

Viscous Liquids Performance Data

During the conveyance of a fluid with a viscosity of 6000 cPs, the pump rate decreases to 60% of its rated value (100% = water). Valid for 3/4" pumps & larger.

Note: Please consult Yamada when both the pressure and temperature exceed 70 PSI and 180° F, respectively.

5. The dashed lines plot curves for air consumption as shown in the graph respectively.

The point A, intersection point as a result of the condition "3." above (water discharge: 60 L/min, discharge head: 30 m) is located about in the middle between the 400L/min air consumption curve and the 600L/min air consumption curve. Therefore, the air consumption under this condition is approximately 500 L/min (ANR). Since the air consumption is calculated by converting to the barometric pressure, it does not vary depending on the used air pressure.

Flap Valve Series

The Yamada Flap Valve Pump is designed to pump fluids containing solids up to 30mm in diameter. Built on the foundation of the NDP Series line of pumps, the Flap Valve Pump incorporates the Yamada patented stall-free/lube-free air valve and rugged, easy-to-service bolted construction.

Designed for durability in the field, the Flap Valve Pump's innovative flap-type check valve technology provides streaming passage of solids while minimizing clogging and downtime. Four external bolts release valve covers on either side permitting service and maintenance without removing the pump from service.

**30mm of Maximum Size of Solid
2 inch Port Size**

✓For additional information, please request the Flap Valve Series catalog or visit www.yamadacorp.co.jp/global

Mechanical Switch Series

The Yamada Mechanical Switch Pump is designed for use in process type applications including filter press, high pressure, extended deadheading, long runs of discharge pipe, and where air consumption is critical.

Available in 1-1/2", 2" and 3" port sizes, these pumps are built on the liquid platform of a standard NDP Series pump, but with a mechanically-actuated air motor.

Air power is conserved by actuating the air valve using a mechanical linkage instead of relying on air pressure. Air power is reduced versus a standard air-actuated valve, providing higher pump efficiency.

**0.1 – 0.85MPa of Discharge Pressure
1-1/2 inch, 2 inch and 3 inch Port Size**

✓For additional information, please request the Mechanical Switch Series catalog or visit www.yamadacorp.co.jp/global

F-Series High Purity Pumps

Extensively field proven, Yamada F-Series clean room manufactured pumps are specifically designed for the safe and efficient transfer of ultra high-purity process chemistries. They provide maximum corrosion resistance, ultra high-purity levels and low particle generation.

Pumps includes 100% machined virgin PTFE diaphragms, liquid chambers and manifolds.

**Clean Room Manufactured
1/4 inch to 1 inch Port Size**

✓For additional information, please request the High Purity Pumps catalog or visit www.yamadacorp.co.jp/global

E-Series Solenoid Operated Pumps

This range of pumps is designed to operate using an external electronic pump driver coupled to a proximity sensor built into the pump. They provide the operator with unrivaled operational performance, reliability and cost effectiveness. This system removes any chance of pump stoppages caused from blockages or failures of a standard internal air switching system.

**External Electric Solenoid Controlled
3/4 inch to 3 inch Port Size**

✓For additional information, please request the Solenoid Operated Pumps catalog or visit www.yamadacorp.co.jp/global

Powder Pumps

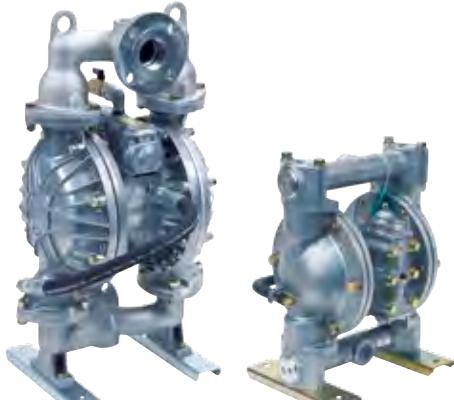

**For dry powder transfer
1 inch to 3 inch Port Size**

Yamada Powder Pumps are designed to move bulk powders more effectively throughout your process vs. other unsafe and labor intensive means. These heavy duty pumps will consistently transfer fine-grained, low-bulk density dry powders in a dust-free operation.

✓ For additional information, please request the Powder Pumps catalog or visit www.yamadacorp.co.jp/global

High Pressure Pumps

**2:1 Ratio
3/4 inch to 3 inch Port Size**

Yamada High Pressure Pumps are designed for applications when a maximum 0.7MPa operating pressure is insufficient to overcome system requirements.

The flow rate is roughly half of the equivalent size pump output, through a maximum discharge pressure of 1.4MPa can be achieved with only 0.7MPa air inlet pressure supplied.

The 2:1 discharge ratio is achieved by applying air pressure to the surface area of both diaphragms, doubling the discharge output.

✓ For additional information, please request the High Pressure Pumps catalog or visit www.yamadacorp.co.jp/global

Specialty Pumps

FDA Compliant Pumps

Yamada FDA Compliant Pumps are specifically designed for Food, Pharmaceutical & Cosmetic industries where 3A or USDA standards are not required.

Pumps include 316 Stainless Steel wetted components with passivated satin finish, PTFE-coated air motor, sanitary clamp fittings, and FDA compliant elastomers.

✓ For additional information, please request the *FDA Compliant Pumps catalog* or visit www.yamadacorp.co.jp/global

ATEX Compliant Pumps

Select Yamada DP and Yamada NDP Series pumps are compliant with ATEX guidelines for safe pump operation in potentially dangerous or explosive areas. Please consult Yamada.

✓ For additional information, please request the *ATEX Compliant Pumps catalog* or visit www.yamadacorp.co.jp/global

CSA Certified Pumps

Yamada offers a series of three CSA certified pumps, each built on the consistently designed foundation of the field proven DP- and NDP-Series pumps. Pumps are constructed with aluminum wetted components and durable Buna N elastomers certified by CSA International.

Available in 3/4", & 1" port sizes with flow rates from 1–46 GPM. Note: CSA Certification Class 3305-10 & 3305-90 limits natural gas temperature range to 32°F–125°F.

✓ For additional information, please request the *CSA Certified Pumps catalog* or visit www.yamadacorp.co.jp/global

U.L. Listed Pumps

Yamada U.L. listed pumps are manufactured for the petrochemical, chemical, and petroleum industries to meet safety requirements established by Underwriters Laboratory Code 79. Pumps include Aluminum wetted components with durable Hytrel® and PTFE elastomers, approved by U.L. to transfer volatile fluids.

Pumps are available in 3/4" and 1" port sizes, with flow ranges from 1–46 gallons per minute.

U.L. Code 79 limits pump discharge pressures to no more than 50 PSI and pumping temperatures must adhere to the range of -20°F to 125° F.

✓ For additional information, please request the *U.L. Listed Pumps catalog* or visit www.yamadacorp.co.jp/global

	803406	STU-40-40		O48.6xØ22.0 (1-1/2")	Size 40

Companion Flange / Raised Pump Bracket

JIS, DIN, ANSI and Ferrule
Flanges made of SUS304 or PP

Raised Pump Bracket
is available on request

Pneumatic Cycle Counter

Pneumatic 8-digit
mechanical type counter

- ✓ No count up in dry run
- ✓ No reset function
- ✓ Modification on the center body is required for installation

Model No.	Model	Fits Pump
803413	NMC-ANS	NDP Series*
804542	NMC-ANF	NDP-5, 15
804847	NMC-ANH	NDP-P20, P25

*Except Mechanical Switch Pumps

No.	Description	Qty
①	Counter (8-digit, No reset func.)	1
②	Quick Exhaust Valve 1/8"	1
③	Socket 1/8"	1
④	Elbow 1/8"	1
⑤	Elbow M5	1
⑥	6x4 Nylon Tube 1,000mm	1
⑦	6x4 Nylon Tube	1

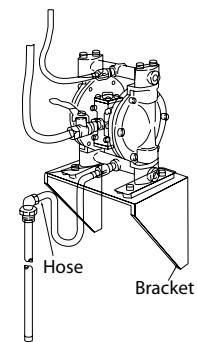

High-Low Level Controller

This unit is used to control the high and low levels of liquid being pumped into or out off a container. This device is driven by compressed air and is therefore suitable for use in highly explosive environments.

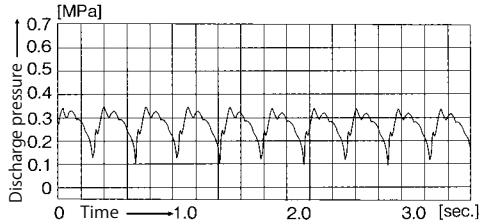

The systems is also designed to work in many harsh environments, e.g. areas with high temperature, high humidity or even areas where there are high electromagnetic fields. It can handle any liquid with a viscosity of less than 1000cps.

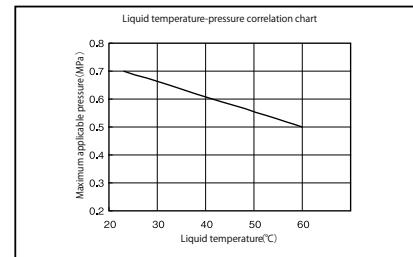

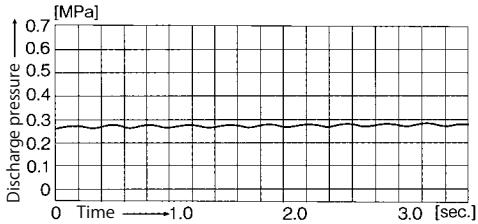

Model No.	Model	Supply Air Press	Output Air Flow	Viscosity Limit	Weight
480005	SA-4150	0.3-0.7MPa	Max 300L/min	1Pa·s or less	6kg

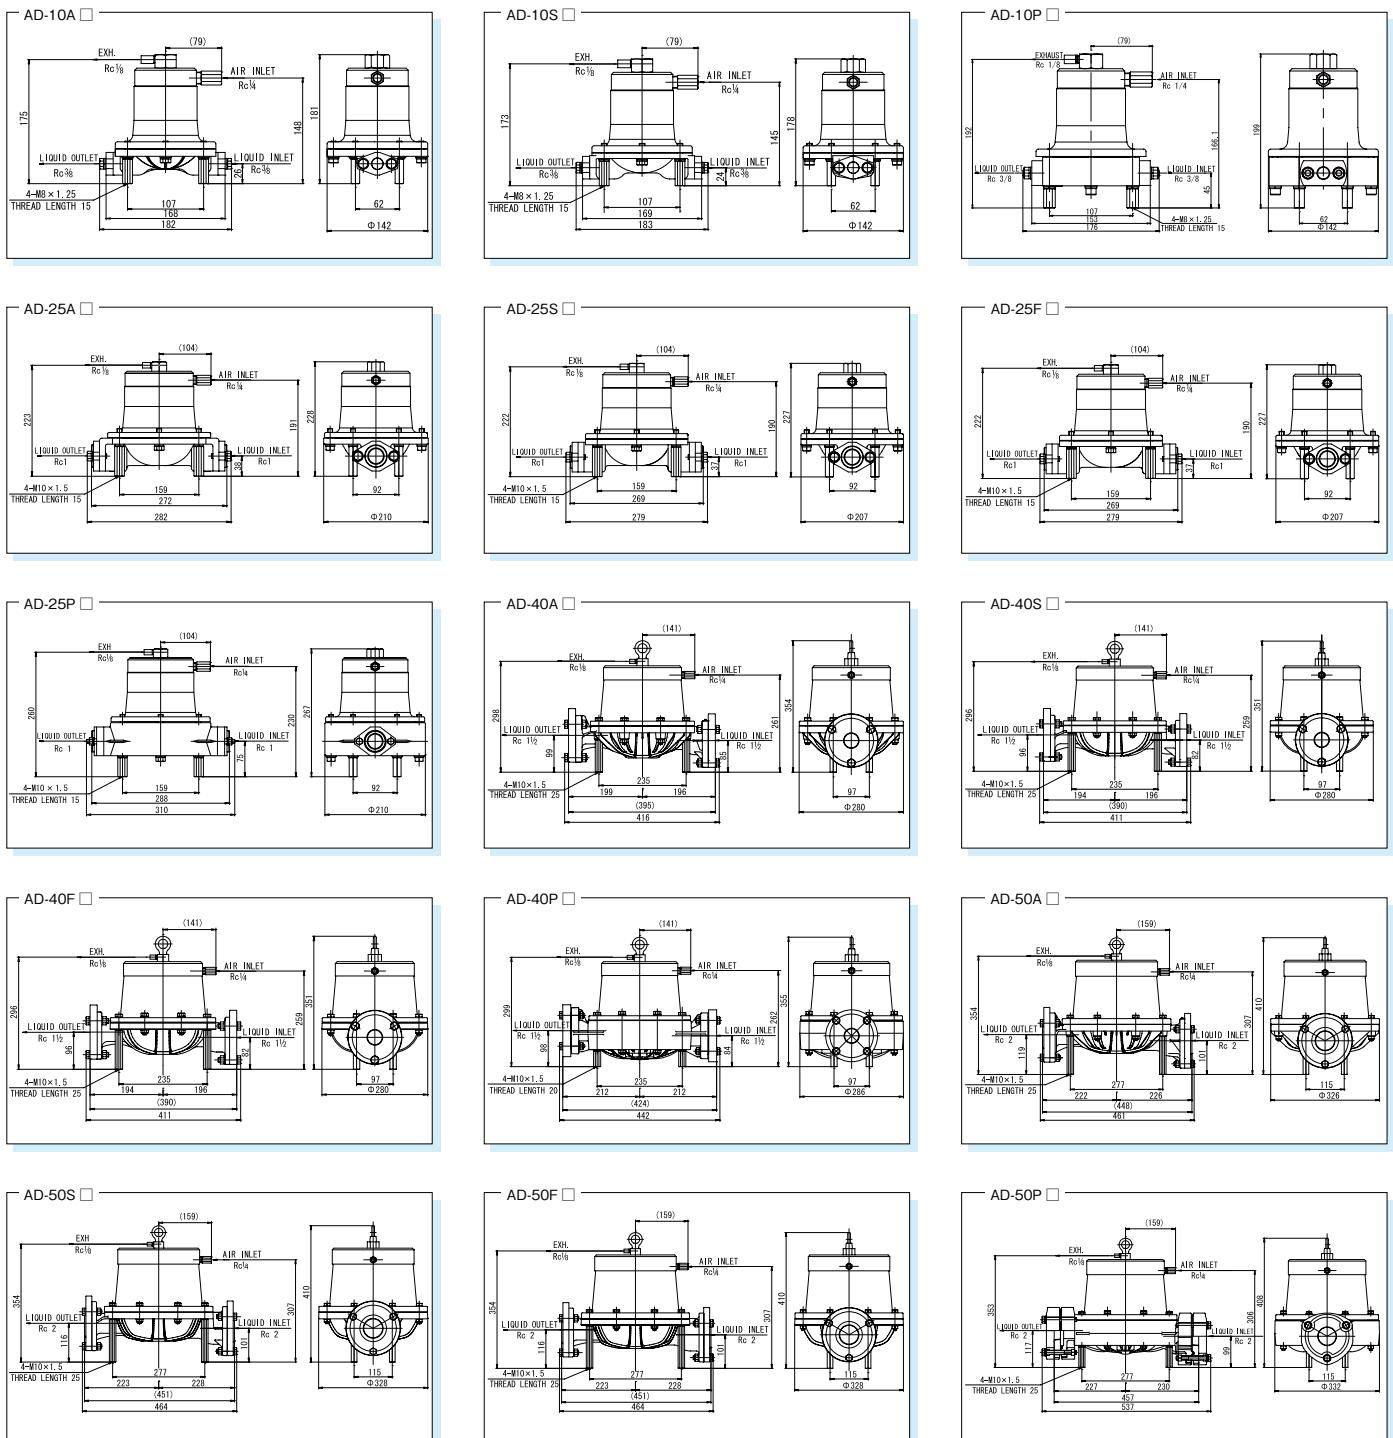

Without Pulsation Dampeners

Ideal Installation for Air-Operated Double Diaphragm Pump

REQUEST SHEET

YAMADA CORPORATION

International Department

Phone: 81-(0)3-3777-0241

FAX: 81(0)3-3777-0584

For help and recommendations for pump choice and applications, please complete this form with as many details as possible.

Please send it by fax to Yamada Corporation and we will get straight back to you.

- Are you already using Yamada products ? (YES•NO)
- Have you dealt directly with Yamada Corporation in the past ? (YES•NO)
- How did you learn about Yamada Corporation.
()

Purpose of this request.

- Request for technical information.
- Request for quotation.
- Request to purchase products.
- Request for more information.
- Request for catalogues or flyers.
- Request for local dealer contact details.
- Other.

Company _____

Address (with Postcode): _____

Phone: ()

Fax: ()

Department/Section/Group: _____

Name _____

To: YAMADA CORPORATION, International Department

Please provide a sketch of your system including as many details as possible

- 1) Potential product: Model Diameter A
- 2) Objectives:
- 3) Specifications of fluid:

Name	Fluid properties	Concentration	%
Specific gravity	Viscosity	cp	Temperature °C
Slurry included?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	→ Concentration	Wt% Diameter mm
- 4) Pump output (Flow rate) Nominal rate /min /hr Max. rate /min /h
Total stroke M MPa
- Ambient temperature
- 5) Fluid container: 200L Drum container 20L Pail container 18L square container
 Custom container: Specifications
- 6) Operation conditions: Outdoor Indoor
Operation frequency (How often do you run your pump?) Continuous / Intermittent hr/day or hr/week or hr/month
- 7) Air supply condition: MPa
- 8) Number of units: unit(s)
- 9) Expected commercial conditions
- 10) Other requirements

CAUTION WHEN SELECTING A PUMP

Yamada offers a large range of Air Operated Pumps to cater for many different kinds of materials and conditions. When selecting the most appropriate pump for a particular selection and installation please consult your local Yamada Pump Distributor or Yamada Corporation.
